The Problem

Every student deserves the chance to learn. For too many—especially youth who are black, brown, and Latino, and especially those living at or near poverty—our schools have failed and students feel alienated and disengaged. It is not students alone who are alienated by the system; educators too are alienated, robbed of the agency to create the climate and culture students need to succeed.

The Vision

One day, our public schools will bring greater equity to society empowering educators to develop a culture of compassion, trust, and high expectations so adolescent learners who were once failed by the system can excel.

Our Mission

Eskolta is dedicated to catalyzing the capacity of educators to reinvent schools, inspiring the students the school system has failed and unleashing their potential.

Changes must be made not only at the classroom level, but at the school and district level if we are to transform the culture of education.

To help

districts

and

educators

For all schools to help students reach their full potential in public school and beyond:

Students

need compassion, trust, and high expectations

Educators

need research and collective efficacy to drive positive change.

So

Schools

need a culture of learning and safety to take constructive risks for students. **Eskolta** brings to the work:

A Researcher's Mindset

bringing past research along with an inquiry approach to analyze, synthesize, and explain lessons learned from new data.

A Designer's Approach

managing a process of usercentered testing of new materials through collaborative learning from experience.

Best Practices for Equity & Excellence

Learning mindsets, mastery learning, transparent feedback, personalization, student-centered pathways, and critical awareness.

Understand

healthy school
environments
through research
& resource
creation

Improve

by redesigning school practices, environment, and policies

So

that

Sustain and Spread by

building capacity for practices to take root

Students

who were once failed by the system have mindsets, skills, and understanding to excel in high school and succeed on a career pathway.

Teachers

have used continuous learning to adapt practice to their students and integrate into their schools

In order to Transform the culture of education from desk to district

Districts & schools

have internal coherence, culture, and systems to support & sustain the work

Theory of Action:

Eskolta brings a researcher's mindset, a designer's approach and best practices for equity and excellence to their work

Rationale

Education is a **complex system**. Too often, solutions to problems are offered as if a single panacea will finally "fix" what is broken.

We approach this complex system recognizing that it will **always need fixing** and there are **no simple solutions**.

By being **disciplined and data-informed** we can learn from our own efforts and build a **habit of improvement**.

Inquiry, self-study, and collaborative learning –the hallmarks of scientific research– are rooted in the ideas of **John Dewey**, **Donald Schön**, **Peter Senge**, and **Anthony Bryk**.

Strategies

Establish

existing research base to inform new learning

Investigate

data through disciplined search for understanding

Analyze

to engage in deep quantitative and qualitative research

Collaborate

across multiple schools exploring similar problems

Provide action research tools and resources for others to engage in their process

Theory of Action:

Eskolta brings a researcher's mindset, a designer's approach and best practices for equity and excellence to their work

Rationale

Solutions imposed on educators from outside do not last.

When educators instead experience the **agency of design**, they are more likely to achieve success: creating solutions that align to **school goals** and **student needs**, **prototyping** those solutions, and **refining** them through iterative tests (**David Kelley**).

The sense of **coherence** (**Richard Elmore**) and collective **efficacy** (**Jenny Donohoo**) educators experience this way can have a dramatic impact on student learning.

This results in tools and materials **personalized** to the schools using them.

Strategies

Seek to understand

lived experience of students affected by the problem

Build capacity of educators as learners and leaders exploring and driving possible solutions

Test and refine

ideas through use in practice

Align projects to core goals and shepherd from concept to completion

Synthesize and distill learnings

into cogent, user-friendly materials and resources

Theory of Action:

Eskolta brings a researcher's mindset, a designer's approach and best practices for equity and excellence to their work

Rationale

Adolescent learners, particularly students of color and students in communities of poverty, are too often **failed by the school system**.

Many experience school as a place where they do not have **purpose, belonging, or efficacy** to learn (Hulleman; Cohen; Steele; Dweck; Yeager).

The feedback they have received tells them that **they are the problem** (Hattie & Timperley; Herman).

They have not had the personalized guidance to practice **metacognitive and comprehension skills** critical to future success, or to learn about the **historical and societal background** that affects them.

Practices that address this can **turn around learning for these students**. (Hattie; Farrington et al)

Strategies

Strength-base culture that cultivates students' learning mindsets

Mastery learning of comprehensions skills through relevant content

Transparent, actionable feedback that develops student's metacognitive skills

Student-centered scheduling and programming for personalized pathways to postsecondary success

Personalized guidance on the path to successful college, career, and life

Culturally responsive classrooms addressing historical inequity affecting students' lives
